

EasyShift

Patient Repositioning System

**In-bed mobility at
the push of a button.**

Benefits to Patient

Ability to **boost patient up in bed while head-of-bed is elevated up to 30°** helps maintain proper respiratory functioning.

• **Frequent position changes** from turning and micro-turning promote systemic circulation to **reduce pressure injuries.**

Patented inflation technology holds patient in offloaded position for **sustained pressure relief**, while using **fewer pillows and wedges.**

EasyShift repositions patient gently and continuously, **reducing rapid shear forces** which can cause skin abrasions and lacerations.

Fewer hands touching the patient during repositioning improves patient sensory comfort, privacy, and dignity.

Benefits to Care Provider

Staff time savings reduce the need for lift teams to reposition patients.

EasyShift **virtually eliminates two leading risk factors** for care provider musculoskeletal strain, compared to other repositioning methods that reduce but do not eliminate physical strain.

No trips to the equipment closet.

Device is pre-installed and remains on the bed.

EasyShift's low-touch technology supports care provider when repositioning patients that are disoriented or combative.

For 36" wide mattress, weight capacity is 480 lbs.
