

EasyShift™

Patient Repositioning System

Return-on-Investment: \$15,000-\$50,000 per year

1. Save time for ICU staff

- Instead of 2-4 staff, only need 1-2 staff per repositioning
- Save 15-30 min per repositioning = 200-600 staff hours per year
 - Depends on patient BMI and acuity, repositioning frequency, and bed occupancy

2. Reduce caregiver musculoskeletal injuries

- \$25,000 – 110,000: cost of replacing a nurse due to injuries

3. Reduce pressure injuries

- \$15,000 – 151,000: cost per pressure injury
- 17,000 lawsuits per year directly related to pressure injuries
- 4.31 days: added length-of-stay due to a pressure injury

Revolutionize your patient repositioning protocols for as little as \$25 per day.
